The screenshot displays the ClassNK MRV Portal interface for SEEMP submission. The page title is "SEEMP Ship : NK maru(1234567)". A navigation menu on the left includes options like "Monitoring", "Fuel EU Maritime MP", "SEEMP", and "User Information". The main content area features a "Workflow" table with columns for Status, Last, Update, Guidelines, and First year. Below this is the "Attach documents" section, which contains a "SEEMP information" button (highlighted with a red box) and an "All Download" button. The "SEEMP information" button is associated with the "SEEMP Part II (DCP)" section, which includes a note about Japanese-flagged vessels and a link to "SEEMP Part II Template download". There are four "Drop Files to upload (or click)" buttons arranged vertically, corresponding to SEEMP Part II, SEEMP Part III, Certificate of Registry for the ship, and Others. The "Certificate of Registry" section includes a note about draft certificates and changes in ship particulars. The "Others" section includes a note about official documents for vessel changes not classified by ClassNK. The page also has "Back to list", "<< Prev", "Submit", "Save", and "Delete" buttons.

#### Methods to measure fuel oil consumption

Description	
Method 1: method using bunker delivery notes (BDNs)	1) BDN data is totaled up annual fuel consumption according to each fuel type on January every year. 2) The fuel oil tank reading is carried out at the end of the last calendar year
Method 2: method using flow meters	Annual fuel oil consumption is to be the sum of daily fuel oil consumption data of all relevant fuel oil consuming processes on board measured by flow meters. Amount for each type of fuel consumed from previous daily report for each
Method 3: method using bunker fuel oil tank monitoring on board	To determine the annual fuel oil consumption, the amount of daily fuel oil consumption data measured by tank readings which are carried out by appropriate methods such as automated systems, soundings and dip tapes will be aggregated.
Method 4: method using LNG cargo tank monitoring on board	LNG ships use the Custody Transfer Monitoring System (CTMS) to monitor/record the cargo volumes inside the tanks. When calculating the consumption: .1 the LNG liquid volume consumed is converted to mass using the Methane
Method 5: method using tank monitoring on board for ships using cargo other than LNG as a fuel	To determine the annual fuel oil consumption, the amount of daily fuel oil consumption data measured by tank readings which are carried out by appropriate methods to the cargo used as a fuel. The method for tank readings should be specified in the SEEMP Data Collection Plan

### Generate standard SEEMP Part II

**Review and update log**

Developed by: EU MRV department

Implemented by: Suzuki Saburo

**Edit mode**  Standard  Edit

**Methods to measure fuel oil consumption**

Description	
Method 1: method using bunker delivery notes (BDNs)	1) BDN data is totaled up annual fuel consumption according to each fuel type on January every year. 2) The fuel oil tank reading is carried out at the end of the last calendar year
Method 2: method using flow meters	Annual fuel oil consumption is to be the sum of daily fuel oil consumption data of all relevant fuel oil consuming processes on board measured by flow meters. Amount for each type of fuel consumed from previous daily report for each
Method 3: method using bunker fuel oil tank monitoring on board	To determine the annual fuel oil consumption, the amount of daily fuel oil consumption data measured by tank readings which are carried out by appropriate methods such as automated systems, soundings and dip tapes will be aggregated.
Method 4: method using LNG cargo tank monitoring on board	at Methane boiling point, while other heavier hydrocarbons have higher boiling point and remain at liquid state; and .2 nitrogen mass content is subtracted for each laden voyage from LNG consumption as it does not contribute to CO2 emissions;
Method 5: method using tank monitoring on board for ships using cargo other than LNG as a fuel	To determine the annual fuel oil consumption, the amount of daily fuel oil consumption data measured by tank readings which are carried out by appropriate methods to the cargo used as a fuel. The method for tank readings should be specified in the SEEMP Data Collection Plan

**Generate standard SEEMP**

Generate standard SEEMPボタンを押してもSEEMPが作成されない場合は対象船舶のTOTAL及び各機器の燃料消費量の計測方法、もしくはフローメーターの詳細情報が入力されていない可能性があります。

User information → Ship List タブを開き、対象船舶のShip Detailボタンを押します。8～13ページを参照し、TOTAL及び各機器の燃料消費量の計測方法、フローメーターの詳細情報を入力してください。
